

UPGRADE: NEW VERSION PA970S

The original water pump for Renault and Nissan (Renault 7700105378; Nissan 2101000QAA - 1.4 and 1.6 petrol engines) has been recently updated through the introduction of the innovative INA roller-ball bearing with angular contacts.

In conformity with the above OEM choice, Saleri has developed the same reinforced version; identified by the reference **PA970S** – equipped with the same bearing found on the original water pump.

The new O.E references are the following: **8200428447; 8200582675**

Roller-ball bearing with 3 contact points

In accordance with OES specification PA970S is strictly required for the following application:

Renault Clio 1.6 16v (engine: K4M800/801/804) from 4/05-

PA970S is also suggested for all the other applications, although the normal version of the pump PA970 is still available as a cheaper alternative.

The "S" sign indicating the new reference has been indelibly stamped on the pump, in order to allow the distinction from the normal version PA970.
